

# Malaria eLearning

How will you prepare your employees for international travel in malaria affected areas? In just thirty minutes, this eLearning course provides employees the information they need in order to reduce their risk of contracting the disease.

## Prepared Travellers

Malaria is a leading cause of death amongst expatriates and business travellers every year. Whilst the threat is very real, malaria is both preventable and curable.

Providing appropriate training, prior to travel, is one way of helping to ensure that your employees stay fit, healthy and productive during their travel and on their return home.

## Mitigated Risks

The impact of malaria can be significant. This is not only serious for individual employee's health. It has a bearing on workforce productivity, it affects business continuity, drives up healthcare costs and ultimately impacts company reputation.

Adopting this eLearning demonstrates that your organisation is fulfilling its corporate responsibility towards employees whilst reducing the risks related to travelling in a malaria affected area.

## As Easy As ABCD

This short eLearning module follows the easy-to-digest ABCD approach to mitigating malaria risk:

- Awareness
- Bite prevention
- Chemoprophylaxis (anti-malarial medications)
- Diagnosis and treatment.

On successful completion, each participant receives an International SOS certificate.

## The Right Information

Our series of eLearning modules complement Membership by delivering expert insights. They can be implemented simultaneously across a global workforce.

This Malaria eLearning provides:

- Up-to-date, meaningful and relevant information on mitigating the risks of contracting malaria
- Completion in just thirty minutes
- Practical advice to download and keep for offline use; perfect for travellers to recap on the move
- Reminders of our 24/7 advice and assistance services provided as part of Membership

International SOS Training Hub is a user-friendly learning platform; it can be accessed from computer, tablet and smart-phone, in various languages.
