

Travel Security Escalation Planning

With teams working in high-risk areas, properly designing, testing and maintaining escalation plans will help ensure your peace-of-mind.

Planning

With operations in remote or high-risk areas, you have to have an escalation plan.

If that plan is out-of-date because it was designed for a different site, personnel have changed or world events have moved on there's every chance it won't be effective when you need it.

Unexpected Events

If the unexpected were to happen, you and your team need to know what to do.

Even if it doesn't, your people will feel confident knowing that all reasonable precautions are in place, just in case.

Tried and Tested

By working together, we will help ensure your escalation plans are robust enough so that you make the right response to a crisis.

This could save the lives of your people and protect your organisation's assets.

By designing and testing plans together, you will understand security triggers, enhance your readiness for a crisis and crucially test the team's knowledge of the plan.

Service Components

Plan

- Create or update your plans in line with the current travel security situations and threats
- Define or clarify responsibilities in the escalation process, accounting for staff changes and external providers
- Management briefing for teams to understand and reinforce working knowledge of the plan

Test

- Demonstrate the plan is robust using a hypothetical scenario of an escalating security situation.
