# Hotel Security Advisor

Hotel Security Advisor is self-service information service that provides the latest hotel security status information to support the appropriate sourcing of accommodation and related preparation for your global workforce.

Hotel selection significance

Around the world, hotels can be seen as soft targets by criminals or terrorists. Poor knowledge of the hotel and its surroundings could expose mobile workers to avoidable risks.

However, while travel security risks can present a significant gap and area of exposure, costs typically drive selection of hotels for a business trip. Mitigating accommodation-related risks may also require time dedicated to expensive assessments, creating a scalability challenge.

Hotel Security Advisor helps you to reduce such costs by providing a large database of security assessed hotels, which weigh the hotel's security measures against its dynamic threat environment.

Hotel assessment methodology

We review and analyse political stability, crime, terrorism, social unrest and natural disasters. This analysis is then dynamically united with an individual assessment of a set of critical elements, such as:

- Hotel profile
- Hotel vicinity
- Surveillance
- Room Security
- Preparation and planning

A near-real-time information service

Hotel Security Advisor is a near-real-time secure hotel information service designed for Travel and Security managers.

Hotel security status information is continually expanded by our team of travel security experts to support you on the appropriate sourcing of accommodation and related preparation of your global workforce, as part of a comprehensive travel risk mitigation policy.
